

THE EFFECTIVENESS OF TECHNOLOGICAL METHODS TO REGULATE WEEDINESS OF INDUSTRIAL VINEYARDS

V. T. HONTAR, I. V. SHEVCHENKO

The results of many years research the effectiveness of different methods regulation weediness of vineyards. Based on the analysis data and thematic literature found need to move vineyard on ecological basis, which will reduce the technogenic pressure on the grape ecosystem. It was defined direction phytocoenotic regulating the amount and development of segetal vegetation in plantations of grapes.

Key words: *grapes, weeds, control methods, herbicides, power consumption.*
