*In the scientific article author research on the basis of analysis of normative-legal acts which regulates the insurance of agricultural production with state support. Research problems and propose ways of removal collies in the legal regulation of this subject.*

***Insurance, insurance of agricultural production with state support.***

Agriculture of Ukraine is one of the priorities for implementing state support to improve economic performance as a whole. Insurance as one of the most effective ways to manage risk, enables advantageous to combine the interests of all participants of agricultural insurance and agricultural insurance is realized through the relationship with its own set of characteristics that distinguishes them from other legal obligation.

Legal basis of insurance in agroindustrial complex researched by scientists economic nature. Scientific and theoretical basis of our research were the works of famous domestic scientists and legal scholars in the field of agricultural law.

**The purpose** of this article is to study the impacts of legal regulation of agricultural products insurance with state support.

In theory, there are three options voluntary agricultural insurance. The first version has features only on harvest crops and perennial plants. The second option - the insurance of farm animals, poultry, rabbits, fur animals,

bee colonies, fish and other aquatic resources and livestock production. The third insurance buildings, agricultural machinery and other property. However, government support, introduced by the Law of Ukraine "On peculiarities of agricultural products insurance with state support" applies only to the first two options.

Insurance harvest crops and perennial plants is carried out in case of damage due to occurrence of events (risk insurance) provided a standard insurance product.

The second type of voluntary agricultural insurance, namely insurance livestock, poultry, rabbits, fur animals, bee colonies, fish and other aquatic resources and livestock production, also provides the possibility to get state compensation insurance payments in case of job loss due to occurrence of events (insurance risks ) provides a standard insurance product.

The third type of voluntary agricultural insurance covers insurance buildings, agricultural machinery and other property. However, government support in this area is not provided, and insurers carry out its on the basis of common rules and as one of the varieties of property insurance against fire risks and natural disasters, from accidents, theft and other illegal acts of third parties.

In summary, the following **conclusions**: improving the mechanism of payment for insurance premiums for agricultural producers is a positive factor for the further development of agriculture, but it requires approval of the law contained in the analyzed legal acts regulating insurance involving agricultural producers.
