

Comparative characteristics of range current anthelmintic ukrainian production(for example «Ukrzoovetprompostach","Brovafarma", "Ukrvetprompostach")

Derkach IM, Lemeshko OV

Keywords: anthelmintics, range, manufacturer, active ingredient.

The paper presents an analysis of current trends in stock anthelmintic veterinary medicines offered by national producers for example «Ukrzoovetprompostach", "Brovafarma", "Ukrvetprompostach".

For modern antiparasitic drugs are characterized by a wide range of actions, multi mechanisms of action, route of administration, presentation, ease of use. The main disadvantages often is that they do not recommend the use of cows in the last month of pregnancy and in lactation and that the slaughter of animals for meat is allowed after 7, 14 or 28 days, and milk can be used in 2 or 5 days after the last injection.

These active ingredients are often praziquantel, albendazol, fenbedazol, ivermectin, levomizolhydrochlorid.

One of the largest domestic producers of anthelmintic drugs in Ukraine is of "Brovapharma" (Brovary). Thus, in recent years established and put into production innovationss such as Brovermektyl 2% (the only class capable of applying Avermectin drinking water), Brovatriol (combined antyhelminthics sheep with a universal range of action).

Domestic producers anthelmintic drugs may compete in both the domestic and international markets.
