

**INFLUENCE OF THYMOGEN AND TETRAVYT ON QUANTITATIVE
INDICATORS OF MICE BLOOD.
Vyhyreva M. V., Baymatov V. N.**

Timogen, tetravit, mice, quantitative blood indices.

As a result of studies was found the mice body's response on timogen, tetravit and their combined effect. Materials and methods. Business conducted in the department of pathological Bazet hycheskoy fyzyolohyy MHAVMyB th. K. I. Skryabyna. We sformyro That was the five probes the мыshy groups (n = 25). Yspolzovaly males belыh nonlinear мыshy Average massoy 20 grams. Мыsham Tymogen administered in doses DIFFERENT, and tetravyt intramuscularly. In vseh animals carried Study of administering a blood to drugs and 24 hours after Introduction. Hemoglobin yssledovaly with pomoshchju hemometra Sali, the number of red blood cells and in cells leykotsytov podschyтыvaly Horyaeva and leucogram выvodyly on blood smears, okrashennyh Romanovsky -Hymza. Poluchennыe Data obrabatывалy statystychesky, p Using batch programs on your PC.

Results of research. We set, something happening in the blood after Changing indicators of administering a Tymogen and tetravyta. Results of research predstavlenы in tables and diagrams sootvetstvuyuschyh.
