

## **PROBLEMS OF MANAGEMENT REPORT PREPARATION OF**

### **EXPERIMENTAL LABORATORY.**

***Chicherin M. S., Serdyukov J. C.***

#### ***Report, activity, testing laboratory.***

*Showing the problems of preparing management report on the activities of the testing laboratory. Report on the activities of the testing laboratory is required to analyze the effectiveness of the quality management system and ensure that the laboratory work of the laboratory to the international standard DSTU ISO / IEC 17025.*

*Analysis of the activity of the laboratory, in preparation for the Accreditation, for many laboratories and test centers is a task difficult. In most cases, the management decides on a chaotic collection of all available information, thus assigning Execu-NITEL without providing them with adequate powers. As a result, these professionals have great difficulty in collecting information.*

*Some experts in the field of quality [2] recommend the creation of audit teams to gather information and indicate that it covers this test.*

*It should be noted that for the majority of testing laboratories in Ukraine recommendatory literature by foreign authors is practically inapplicable because of the national specificity (legislation, the level of training of personnel, material and technical base, etc.).*

*Taking into account the existing experience of going through the accreditation and practical recommendations to foreign audiences, seems more appropriate to arrange for the preparation and submission for consideration*
